## 1 PROBLEM

(Gate IN - 2021 Q.37) Consider that  $X$  and  $Y$  are independent continuous valued random variables with uniform PDF given by  $X \sim U(2, 3)$  and  $Y \sim U(1, 4)$ . Then  $\Pr(Y \leq X)$  is equal to .....

## 2 SOLUTION

In figure 0, rectangle  $ABCD$  represents sample space of  $(X, Y)$ .  $Y \leq X$  for any point  $(X, Y)$  if and only if the point lies on or below line  $EF$ . Therefore

$$\Pr(Y \leq X) = \frac{\text{Area of } AEFD}{\text{Area of } ABCD} \quad (2.0.1)$$

$$= \frac{1}{2} \quad (2.0.2)$$

Alternately, we can write

$$\Pr(Y \leq X) = \int_2^3 \Pr(Y \leq X | X = x) \quad (2.0.3)$$

$$= \int_2^3 F_Y(x) dx \quad (2.0.4)$$

$$= \int_2^3 \frac{x-1}{3} dx \quad (2.0.5)$$

$$= \frac{1}{2} \quad (2.0.6)$$
