#### 1 Problem

Given that the events A and B are such that  $P(A) = \frac{1}{2}$ ,  $P(A + B) = \frac{3}{5}$  and P(B) = p. Find p if they are

- i) mutually exclusive
- ii) independent

### 2 Solution

i)

Since the events are mutually exclusive, by definition

$$P(AB) = 0 \tag{2.0.1}$$

$$\implies P(A+B) = P(A) + P(B) \tag{2.0.2}$$

On substituting the values of P(A), P(B) and  $P(A \cup B)$  in (2.0.2), we get

$$\frac{3}{5} = \frac{1}{2} + p \tag{2.0.3}$$

$$\implies p = \frac{1}{10} \tag{2.0.4}$$

ii)

Since the events are independent

$$P(AB) = P(A)P(B) \tag{2.0.5}$$

We know

$$P(A + B) = P(A) + P(B) - P(AB)$$
 (2.0.6)

$$\implies P(A + B) = P(A) + P(B) - P(A)P(B)$$
 (2.0.7)

On substituting the values of P(A), P(B) and  $P(A \cup B)$  in (2.0.7), we get

$$\frac{3}{5} = \frac{1}{2} + p - \frac{1}{2}p\tag{2.0.8}$$

$$\implies p = \frac{1}{5} \tag{2.0.9}$$
